Habitats of Georgia and Adaptations	Pollution and Conservation	Rocks	Soil	Fossils	Heat
<p>S3L1. Obtain, evaluate and communicate information about the similarities and differences between plants, animals, and habitats found within geographic regions (Blue Ridge Mountains, Piedmont, Coastal Plains, Valley and Ridge, and Appalachian Plateau) of Georgia.</p> <p>a. Ask questions to differentiate between plants, animals, and habitats found within Georgia’s geographic regions.</p> <p>b. Construct an explanation of how external features and adaptations (camouflage, use of hibernation, protection, migration, mimicry) of animals allow them to survive in their habitat.</p> <p>c. Use evidence to construct an explanation of why some organisms can thrive in one habitat and not in another.</p>	<p>S3L2. Obtain, evaluate, and communicate information about the effects of pollution (air, land, and water) and humans on the environment.</p> <p>a. Ask questions to collect information and create records of sources and effects of pollution on the plants and animals of Georgia.</p> <p>b. Explore, research, and communicate solutions, such as conservation of resources and recycling materials to protect plants and animals of Georgia.</p>	<p>S3E1. Obtain, evaluate, and communicate information about the physical attributes of rocks and soils.</p> <p>a. Ask questions and analyze data to classify rocks by their physical attributes (color, texture, luster, and hardness) using simple tests.</p>	<p>S3E1. Obtain, evaluate, and communicate information about the physical attributes of rocks and soils.</p> <p>b. Plan and carry out investigations to describe properties (color, texture, capacity to retain water, and ability to support growth of plants) of soils and soil types (sand, clay, loam).</p> <p>c. Make observations of the local environment to construct an explanation of how water and/or wind have made changes to soil and/or rocks over time.</p>	<p>S3E2. Obtain, evaluate, and communicate information on how fossils provide evidence of past organisms.</p> <p>a. Construct an argument from observations of fossils (authentic or reproductions) to communicate how they serve as evidence of past organisms and the environments in which they lived.</p> <p>b. Develop a model to describe the sequence and conditions required for an organism to become fossilized.</p>	<p>S3P1. Obtain, evaluate, and communicate information about the ways heat energy is transferred and measured.</p> <p>a. Ask questions to identify sources of heat.</p> <p>b. Plan and carry out an investigation to gather data using thermometers to produce tables and charts that illustrate the effect of sunlight on various objects.</p> <p>c. Use tools and every day materials to design and construct a device/structure that will increase/decrease the warming effects of sunlight on various materials.</p>
